Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology)

Esmail Et Al Jabbari

Global warming, pollution, food and water shortage, cyberspace insecurity, over-population, land erosion, and an overburdened health care system are major issues facing the human race and our planet. These challenges have presented a mandate to develop “natural” or “green” technologies using nature and the living system as a guide to rationally design processes, devices, and systems. This approach has given rise to a new paradigm, one in which innovation goes hand-in-hand with less waste, less pollution, and less invasiveness to life on earth. Bioinspiration has also led to the development of technologies that mimic the hierarchical complexity of biological systems, leading to novel highly efficient, more reliable multifunctional materials, devices, and systems that can perform multiple tasks at one time. This multi-volume handbook focuses on the application of biomimetics and bioinspiration in medicine and engineering to produce miniaturized multi-functional materials, devices, and systems to perform complex tasks. Our understanding of complex biological systems at different length scales has increased dramatically as our ability to observe nature has expanded from macro to molecular scale, leading to the rational biologically-driven design to find solution to technological problems in medicine and engineering.

The following three-volume set covers the fields of bioinspired materials, electromechanical systems developed from concepts inspired by nature, and tissue models respectively.

Volume 1: Bioinspired Materials

Volume 2: Electromechanical Systems

Volume 3: Tissue Models

The first volume focuses on the rational design of nano- and micro-structured hierarchical materials inspired by the relevant characteristics in living systems, such as the self-cleaning ability of lotus leaves and cicadas' wings; the superior walking ability of water striders; the anti-fogging function of mosquitoes' eyes; the water-collecting ability of Namib Desert Beetles and spider silk; the high adhesivity of geckos' feet and rose petals; the high adhesivity of mussels in wet aquatic environments; the anisotropic wetting of butterflies' wings; the anti-reflection capabilities of cicadas' wings; the self-cleaning functionality of fish scales; shape anisotropy of intracellular particles; the dielectric properties of muscles; the light spectral characteristics of plant leaves; the regeneration and self-healing ability of earthworms; the self-repairing ability of lotus leaves; the broadband reflectivity of moths' eyes; the multivalent binding, self-assembly and responsiveness of cellular systems; the biomineral formation in bacteria, plants, invertebrates, and vertebrates; the multi-layer structure of skin; the organization of tissue fibers; DNA structures with metal-mediated artificial base pairs; and the anisotropic microstructure of jellyfish mesogloea. In this volume, sensor and microfluidic technologies combined with surface patterning are explored for the diagnosis and monitoring of diseases. The high throughput combinatorial testing of biomaterials in regenerative medicine is also covered.

From reader reviews:

Anna Maples:

Book is to be different per grade. Book for children till adult are different content. As it is known to us that book is very important for people. The book Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) was making you to know about other expertise and of course you can take more information. It is rather advantages for you. The reserve Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) is not only giving you a lot more new information but also for being your friend when you experience bored. You can spend your own spend time to read your guide. Try to make relationship with all the book Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology). You never really feel lose out for everything if you read some books.

Lavone Anderson:

Here thing why that Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) are different and trusted to be yours. First of all reading through a book is good but it really depends in the content of the usb ports which is the content is as delightful as food or not. Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) giving you information deeper and different ways, you can find any book out there but there is no reserve that similar with Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology). It gives you thrill looking at journey, its open up your eyes about the thing in which happened in the world which is might be can be happened around you. You can easily bring everywhere like in park your car, café, or even in your technique home by train. In case you are having difficulties in bringing the published book maybe the form of Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) in e-book can be your substitute.

Adrian Kao:

Spent a free a chance to be fun activity to do! A lot of people spent their down time with their family, or their very own friends. Usually they performing activity like watching television, gonna beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Do you wish to something different to fill your free time/ holiday? May be reading a book might be option to fill your cost-free time/ holiday. The first thing you will ask may be what kinds of book that you should read. If you want to test look for book, may be the reserve untitled Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of

Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) can be excellent book to read. May be it can be best activity to you.

Suzanne Palmer:

Is it you actually who having spare time then spend it whole day through watching television programs or just lying down on the bed? Do you need something totally new? This Handbook of Biomimetics and Bioinspiration:Biologically-Driven Engineering of Materials, Processes, Devices, and Systems(In 3 Volumes) (World Scientific Series in Nanoscience and Nanotechnology) can be the response, oh how comes? A book you know. You are consequently out of date, spending your extra time by reading in this fresh era is common not a nerd activity. So what these guides have than the others?
