'An impressive accomplishment.'

'Offers positive solutions that no rational person, organization or government can ignore - except at their peril.'

Stephen H. Schneider, Professor for Interdisciplinary Environmental Studies, Stanford University, and author of The Genesis Strategy: Climate and Global Survival

'The science is clear and the message of this book is that there is no more time for delay.'

Rosina M. Bierbaum, Dean, University of Michigan

While changes in emissions and atmospheric concentrations of greenhouse gases are projected to be slow and smooth, the intensity and impacts of climate change on the environment and society could be abrupt and erratic. Surprising and nonlinear responses are likely to occur as warming exceeds certain thresholds, inducing relatively rapid and disruptive changes in the Greenland and West Antarctic ice sheets, precipitation intensity and patterns, coastal inundation, the occurrence of wildfire, the ranges of plant and animal species and more.

Written by a transdisciplinary group of internationally respected researchers, this book explores the possibilities of such changes, their significance for society and efforts to move more rapidly to limit climate change than current government measures.
