Environmental Tracking for Public Health Surveillance

Environmental Tracking for Public Health Surveillance

Satellite imagery and data are widely used in public health surveillance to provide early warning of disease outbreaks and for averting pandemics. Convergence of these technologies began in the 1970s and has gained wide acceptance in the 21st Century.

Environmental Tracking for Public Health Surveillance focuses on the expanding use of satellite sensor imagery and long-term spectral measurements for assessing and modelling Earth's environments in context of public health surveillance. It addresses vector-borne, air-borne, water-borne, and zoonotic diseases, and explores analytical methods for forecasting environmental conditions and their potential for consequent disease outbreaks. Infectious and contagious diseases are of particular interest in this volume because once parasite-vector-human host pathways are triggered by favourable biological circumstances, pandemic diseases can spread to global scale in a matter of hours. The chapters advance readers through three sets of material. Part I reviews the 1970-2012 history of satellite Earth-science surveillance technology that led to linking natural environments to human diseases, and more generally to public health applications. Part II describes specific infectious and contagious diseases and the threat of emerging and re-emerging diseases. Part III explores the kinds of satellite data, modelling, and electronic information systems being developed to expedite health intercessions and responses at local to regional and global scales of reference. Equally important are the extensive reference sections for chapters in Parts II and III. For readers interested in tracking the development of Earth-science technology, these constitute a thorough entrée to both the health and environmental literature.

The chapters are written jointly by experts in both the health and Earth-science technologies. Each chapter is accompanied by an extensive list of citations to provide background and validation of the current state-of-the-art for a variety of high-interest human diseases and associated health and well-being issues. The importance of day-to-day weather patterns, the impacts of severe weather events and longer-term climate cycles form the basis for developing information systems that meet goals and expectations of national and international health monitoring bodies.

Environmental Tracking for Public Health Surveillance provides a state-of-the-art overview on how environmental tracking data from satellite, airborne, and ground-based sensors are being integrated into appropriate geophysical and spatial information system models to enhance public health surveillance and decision-making from local to global levels, and is intended primarily for a cross-disciplinary professional audience consisting of public health decision-makers, spatial data analysts, modelers, Earth observation specialists, and medical researchers.

From reader reviews:

Jennie Miller:

Nowadays reading books become more than want or need but also become a life style. This reading habit give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book this improve your knowledge and information. The info you get based on what kind of book you read, if you want get more knowledge just go with education and learning books but if you want really feel happy read one having theme for entertaining like comic or novel. The particular Environmental Tracking for Public Health Surveillance is kind of reserve which is giving the reader erratic experience.

Lori Barnes:

Spent a free time for you to be fun activity to complete! A lot of people spent their leisure time with their family, or all their friends. Usually they carrying out activity like watching television, likely to beach, or picnic inside park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own personal free time/ holiday? May be reading a book is usually option to fill your cost-free time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to try look for book, may be the e-book untitled Environmental Tracking for Public Health Surveillance can be great book to read. May be it may be best activity to you.

Corey Barksdale:

This Environmental Tracking for Public Health Surveillance is completely new way for you who has fascination to look for some information given it relief your hunger of information. Getting deeper you onto it getting knowledge more you know or you who still having bit of digest in reading this Environmental Tracking for Public Health Surveillance can be the light food to suit your needs because the information inside that book is easy to get simply by anyone. These books acquire itself in the form that is reachable by anyone, that's why I mean in the e-book contact form. People who think that in publication form make them feel sleepy even dizzy this publication is the answer. So there is not any in reading a reserve especially this one. You can find what you are looking for. It should be here for you. So , don't miss this! Just read this e-book variety for your better life in addition to knowledge.

Philip Mejia:

What is your hobby? Have you heard in which question when you got learners? We believe that that problem was given by teacher to their students. Many kinds of hobby, Every person has different hobby. And also you know that little person like reading or as looking at become their hobby. You should know that reading is very important in addition to book as to be the issue. Book is important thing to provide you knowledge, except your personal teacher or lecturer. You see good news or update concerning something by book. Different categories of books that can you choose to adopt be your object. One of them is Environmental Tracking for Public Health Surveillance.
