Multiple Primary Malignant Neoplasms: Their Incidence and Significance (Recent Results in Cancer Research) Charles G. Moertel

87 3. All polyps should be promptly treated by resection or fulguration as soon as possible after their discovery. 4. The physician must assume the responsibility for impressing the patient with the necessity for frequent and regular follow-up examinations. These examinations must be done at no longer than 1-year intervals for at least 5 years after treatment of the initial lesion and preferably at yearly intervals thereafter. 5. A minimal follow-up examination must include a proctoscopic examination as well as a careful roentgenologic examination of the colon. Summary The literature concerning multiple colonic carcinomas has been reviewed. Data have been presented on 261 cases in which multiple carcinomas of the colon were seen at the Mayo Clinic from January 1, 1944, through December 31, 1953. 0 This represents a known rate of occurrence of 4.3 /0. A marked tendency to multiplicity has been observed in carcinoma of the colon associated with multiple polyposis or with chronic ulcerative colitis. Some evidence has been obtained of hereditary factors in predisposition to malignant disease of the colon. When the diagnosis of a malignant lesion of the colon or rectum has been made, the entire large bowel must be considered a potential source of malignant disease. An integral part of the management of carcinoma of the large bowel must be constant vigilance to ensure early diagnosis and adequate treatment of both simul taneous and interval lesions. References ALBRECHT, P.: Ober die Multiplizitat primarer maligner Geschwiilste. *Oncologia* (Basel) 5, 12 (1952).
