Topics that will be of interest to you include: Why leaves 'turn' color in autumn How certain plants devour insects How a flower develops into a fruit with seeds Why some plants only flower at certain times of the year How water, nutrients, and sugars move within a plant, including tall trees How flowers are pollinated The 'inside' story of how plants manufacture their own food How plants are named and classified How vines 'climb' Why 'pinching' makes plants 'bushy' How plants reproduce sexually Why shoots grow towards light How specific leaf colors can indicate specific mineral deficiencies Botany Illustrated, Second Edition, is especially easy to use because of its great flexibility. You can read the text and look at the drawings, read the text and color the drawings, or just enjoy coloring the drawings.
