Victor W. Marek

Although this area has a history of over 80 years, it was not until the creation of efficient SAT solvers in the mid-1990s that it became practically important, finding applications in electronic design automation, hardware and software verification, combinatorial optimization, and more. Exploring the theoretical and practical aspects of satisfiability, **Introduction to Mathematics of Satisfiability** focuses on the satisfiability of theories consisting of propositional logic formulas. It describes how SAT solvers and techniques are applied to problems in mathematics and computer science as well as important applications in computer engineering.

The book first deals with logic fundamentals, including the syntax of propositional logic, complete sets of functors, normal forms, the Craig lemma, and compactness. It then examines clauses, their proof theory and semantics, and basic complexity issues of propositional logic. The final chapters on knowledge representation cover finite runs of Turing machines and encodings into SAT. One of the pioneers of answer set programming, the author shows how constraint satisfaction systems can be worked out by satisfiability solvers and how answer set programming can be used for knowledge representation.

From reader reviews:

Randy Garrison:

Book is actually written, printed, or outlined for everything. You can know everything you want by a e-book. Book has a different type. As you may know that book is important thing to bring us around the world. Alongside that you can your reading expertise was fluently. A publication Introduction to Mathematics of Satisfiability (Chapman & Hall/CRC Studies in Informatics Series) will make you to possibly be smarter. You can feel far more confidence if you can know about every little thing. But some of you think in which open or reading the book make you bored. It's not make you fun. Why they may be thought like that? Have you in search of best book or acceptable book with you?

Pablo Cook:

Reading a e-book can be one of a lot of pastime that everyone in the world likes. Do you like reading book and so. There are a lot of reasons why people love it. First reading a guide will give you a lot of new information. When you read a publication you will get new information simply because book is one of various ways to share the information or their idea. Second, studying a book will make a person more imaginative. When you studying a book especially fictional book the author will bring you to imagine the story how the people do it anything. Third, you are able to share your knowledge to other individuals. When you read this Introduction to Mathematics of Satisfiability (Chapman & Hall/CRC Studies in Informatics Series), it is possible to tells your family, friends and also soon about yours guide. Your knowledge can inspire others, make them reading a guide.

Linda Guyette:

The book untitled Introduction to Mathematics of Satisfiability (Chapman & Hall/CRC Studies in Informatics Series) contain a lot of information on this. The writer explains your ex idea with easy technique. The language is very simple to implement all the people, so do not really worry, you can easy to read this. The book was authored by famous author. The author will bring you in the new period of literary works. It is easy to read this book because you can continue reading your smart phone, or model, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can open their official web-site as well as order it. Have a nice study.

Samuel Ware:

In this era globalization it is important to someone to get information. The information will make professionals understand the condition of the world. The health of the world makes the information better to share. You can find a lot of references to get information example: internet, newspaper, book, and soon. You can view that now, a lot of publisher that print many kinds of book. The book that recommended to you is Introduction to Mathematics of Satisfiability (Chapman & Hall/CRC Studies in Informatics Series) this book consist a lot of the information from the condition of this world now. This specific book was represented

how can the world has grown up. The words styles that writer use to explain it is easy to understand. Often the writer made some research when he makes this book. Here is why this book suitable all of you.
