Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology)

Zehua Chen

Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) Zehua Chen

While numerous advanced statistical approaches have recently been developed for quantitative trait loci (QTL) mapping, the methods are scattered throughout the literature. **Statistical Methods for QTL Mapping** brings together many recent statistical techniques that address the data complexity of QTL mapping.

After introducing basic genetics topics and statistical principles, the author discusses the principles of quantitative genetics, general statistical issues of QTL mapping, commonly used one-dimensional QTL mapping approaches, and multiple interval mapping methods. He then explains how to use a feature selection approach to tackle a QTL mapping problem with dense markers. The book also provides comprehensive coverage of Bayesian models and MCMC algorithms and describes methods for multi-trait QTL mapping and eQTL mapping, including meta-trait methods and multivariate sequential procedures.

This book emphasizes the modern statistical methodology for QTL mapping as well as the statistical issues that arise during this process. It gives the necessary biological background for statisticians without training in genetics and, likewise, covers statistical thinking and principles for geneticists. Written primarily for geneticists and statisticians specializing in QTL mapping, the book can also be used as a supplement in graduate courses or for self-study by PhD students working on QTL mapping projects.

From reader reviews:

Curtis Monahan:

The feeling that you get from Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) will be the more deep you excavating the information that hide inside the words the more you get serious about reading it. It does not mean that this book is hard to understand but Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) giving you enjoyment feeling of reading. The writer conveys their point in particular way that can be understood by means of anyone who read this because the author of this reserve is well-known enough. This specific book also makes your vocabulary increase well. That makes it easy to understand then can go along, both in printed or e-book style are available. We recommend you for having this Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) instantly.

Jerry Osbourne:

Reading a reserve tends to be new life style on this era globalization. With reading through you can get a lot of information that can give you benefit in your life. Using book everyone in this world may share their idea. Publications can also inspire a lot of people. Many author can inspire their reader with their story or maybe their experience. Not only the story that share in the books. But also they write about the information about something that you need instance. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors these days always try to improve their skill in writing, they also doing some study before they write to their book. One of them is this Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology).

Tonia Lee:

The particular book Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) has a lot info on it. So when you make sure to read this book you can get a lot of gain. The book was authored by the very famous author. The author makes some research just before write this book. This book very easy to read you may get the point easily after reading this article book.

Mildred Ralph:

You can obtain this Statistical Methods for QTL Mapping (Chapman & Hall/CRC Mathematical and Computational Biology) by look at the bookstore or Mall. Merely viewing or reviewing it might to be your solve difficulty if you get difficulties on your knowledge. Kinds of this publication are various. Not only by simply written or printed and also can you enjoy this book by simply e-book. In the modern era such as now, you just looking from your mobile phone and searching what their problem. Right now, choose your own ways to get more information about your book. It is most important to arrange yourself to make your knowledge are still update. Let's try to choose correct ways for you.
